

# THE BAKER COMPANY

---

## Replacement Part Availability

The Baker Company's continuous effort, to develop new products and improve manufacturing methods, has made it difficult to support obsolete products. The production equipment, that older products were produced on, has been scrapped. Our component suppliers have also discontinued most of the parts used in these units. The following products will no longer be supported with replacement parts: VBM, B315, B4000, B6000, NCB, NCB-B, CVF, UVF, BC-4, B40 and B60.

It is The Baker Company's policy to support models, with replacement parts, for ten years after the final production date. The following models are currently supported with replacement parts: SterilGARD II, SterilGARD III, NCB-C, B40ATS, B40A-112, B60A-112, Fume Hoods, AniGard, EdgeGARD, SterilchemGARD, SterilSHIELD and ChemoSHIELD. We will continue to strive to support units, made after 1985, with common parts such as motors, blowers, filters and electronic components.

We look forward to working with you to make sure your Baker units continue to operate efficiently.

Best Regards,

**Tony McGrath**
